

## Senior Software Engineer (C#, JS, Azure)

### FREE MARKET MUSIC

Free Market Music is a music technology company located in Nashville, TN. We are hiring key members of our engineering team to create the next-gen music marketplace. We are looking for people with the ambition, skills, and endurance necessary to create and implement a world-class product.

Our next teammate will take ownership of the features they build while working independently and communicating issues, concerns, and progress along the way. Some of our team is remote, and some of them work in our office. **This position is 100% remote.**

We all wear a bunch of hats at Free Market Music, and we're looking for flexible individuals who love to solve interesting problems. Applicants should have a strong history of designing and building full-stack solutions. We need high-energy engineers with exceptional integrity, transparent communication, and high standards.

#### What you'll be doing:

- Design, develop, and implement features on both the server (C#) and client-side (JS)
- Consistently write readable, performant, scalable, and secure code
- Deliver reliable software that's on-time, well-tested, and maintainable
- Define, architect, and document flows throughout the data lifecycle
- Peer code review and follow standard development methodologies
- Writing unit and integration tests to guarantee your code does what it should
- Design and support CI/CD pipelines

#### What we use:

- C#, .NET 5, ASP.NET Core
- Razor, jQuery, Bootstrap 4, FilePond, DataTables (and more)
- Git, Azure DevOps, Docker
- Azure: App Services, SQL, Cognitive Search, Storage, Service Bus, Redis, Application Insights, Media Services
- Data: MS SQL Server, Dapper, DbUp
- xUnit, Hangfire, Ocelot, FFmpeg, Swagger, NLog

#### What we require:

- Outstanding knowledge of C#, .NET, JavaScript, T-SQL, OOP and RESTful API services
- At least 3 years of development experience at a senior level
- Very comfortable with Git
- B.S. degree or equivalent education

- Excellent English writing and communication skills
- Legal right to work in the US

**Bonus points:**

- Deep knowledge of Azure offerings
- Expertise in implementing Big Data architecture, infrastructure, and analytics
- Experience developing for highly available, horizontally scalable solutions
- A showcase of styling and responsive designs you've worked on
- Experience working with various media types
- Open source projects
